Output layer schema - output_marts_dev

BigQuery project **kutlerri-etl-data-pipeline**, dataset **output_marts_dev** (us-central1). Read from INFORMATION_SCHEMA on 04 Nov 2026 18:37. 42 tables, 466 columns. Row counts and sizes are as stored now (all tenants/stores). Descriptions come from the dbt docs (models/marts, seeds/marts) - BigQuery itself holds no descriptions for this dataset. Key: **P** = partition column, **C1..C4** = clustering order.

Group	Table	Type	Columns	Rows	Size	Partition / clustering	Description
Reports	rpt_charge_panel	TABLE	15	2,864	597.2 KB	P: business_date; C: tenant_id, store_location_id, section_code
